

CASE STUDY

Project Name:
Front Door

Client:
Town of Vail, Colorado

Benefits:

- Provide technical expertise and experience
- Help to maintain "normal" customer service
- Facilitate project schedule

Project Highlight

"SAFEbuilt has strived for and achieved a seamless partnership with the Town of Vail and our building department. I feel as though they are an extension of Vail and our building department with no boundaries and no disconnects. They are doing an excellent job of helping us manage our workload and the plan review and inspection process."

– Town of Vail

A mixed-use, Bavarian-themed building designed to be the "Front Door," or grand entrance, into the heart of Vail Resort's Ski Mountain. Four connected underground levels support four above-ground resorts. Underground levels include parking, storage, loading docks and distribution centers serving each of the resorts. The above-ground portion includes an addition to an existing high-rise building as well as new condos, townhomes, retail shops, spas and restaurants.

In total this project is more than 285,000 square feet; has 21 elevators; two underground parking garages with a 14-bay truck-loading dock for commercial deliveries; a state-of-the-art spa; 13 four-story luxury chalets in five buildings; a full-featured skier services facility; private ski club and pool; and a tunnel for U.S. Forest Service access to Vail Mountain. The loading docks, which serve merchants throughout Vail Village, will help relieve congestion, reduce noise and virtually eliminate truck traffic.
